Activities

Formats and activities

We are driven by our objectives of promoting business, supporting innovation and shaping the future of digital health:

- support when starting a company
- advice on acquiring and applying for funding
- developing a business model
- testing medical and digital innovations in the field
- connecting with the digital health community in Digital Health City Hannover

Finding success through communication

The **Digital Health Talk Hannover** presents local health-related projects. It shares knowledge and connects relevant people in order to establish links within Hannover's healthcare community. Numerous companies, start-ups, projects from science and research as well as experts from the digital health environment present their ideas and a discussion follows.

These sessions are short and sweet and always take place on a Friday once a month from 10:00 to 10:25 a.m.

Business development in healthcare – an insight

The **Digital Health Masterclass** is an online workshop format with a modular structure. Do you want to know more about the german healthcare system? The technical, regulatory and data protection requirements when developing a business model? This workshop provides an initial, compact insight into the requirements for business development in the heavily regulated healthcare sector

We look forward to seeing you there!

Shaping Health – with Social Company Building

Anyone who has an idea – be it in relation to trending innovation themes like femtech, digital health or innovative healthcare business models – can find support with the **Future Health Lab**. It offers a diverse range of potential suggestions and content.

This incubator helps start-ups and company founders to enhance health services and ideas using agile methods in order to achieve lasting effectiveness for solutions in the healthcare industry. In conjunction with our network, the FHI provides know-how, professional mentoring and industry contacts. It also helps its target audiences to find funding.

FUTURE HEALTH LAB

Shaping Health – with Social Company Building

Application-oriented product development for medical care

The **Health Innovation Space** is a growing centre for test environments for application-focused product development and co-innovation in the healthcare sector. Whether digital or analogue, the topics range from nursing to the provision of healthcare.

The goal is to establish an offering for businesses and research organisations so that they can develop new products that are aligned with actual needs in close collaboration with medical and nursing workers. There is a focus on integration with test environments. Using them, everyday experience can be tracked and studied directly.

Thank you for your attention!
